

DECAF SWP

Stock: Out of stock | **Categories:** [Decaf SWP](#) |

ADDITIONAL INFORMATION

Bag Size	60 Kg Bags
Grade	Brazil 17/18
Location	EBL San Leandro
Contract	P116358/1
Record Id	336032.0

The Swiss Water Process is a unique, chemical-free method of decaffeinating coffee. Developed in Switzerland, it relies solely on water, temperature, and time to extract caffeine while preserving the coffee's natural flavor. Green coffee beans are soaked in hot water, releasing caffeine and flavor compounds. This water is then filtered to remove caffeine, and reused to soak new beans. The process relies on osmosis, ensuring only caffeine is extracted, leaving the flavors intact. This method produces decaffeinated coffee that closely resembles the original taste, making it a popular choice for those seeking a high-quality, chemical-free coffee experience.
